

Fuel valve – Recommended / obligatory

A new feature on all Xenon models is available, the cabin fuel valve, originally mounted for Germany, we can now propose an upgrade kit. This is a neat fonction, allows to shut off the engine in case magnetos do not respond, as well for emergency procedures.

Instructions of installation in the kit. Do not attempt to mount non original local parts.

*This is highly recommended, obligatory to some local regulations. Please check with your inspector.

Cost is : 55 euros + shipping.
