

Xenon Carbon

Celier Aviation is now proposing the carbon version for all our composite parts.

It creates a lighter machine by saving 15 kg, necessary for some weight regulations or simply to offer a high-tech version. It is also more stiff. We have chosen the best carbon cloth mixed in some places with Kevlar. The look is also outstanding, and may not require any paint finish. The seats as well as the tanks also come in this version in full carbon / Kevlar mixed. Separate items can be ordered separately as retrofit.

This full carbon version is charged 8 000 Euros extra, and is only done as per confirmed order. We stock in advance cabins only in standard configuration.

This is also valid for our Xenon XL 3 seater and our new version Xenon XL2C, a 3 seat re-configured in 2 seats with huge cargo space ! A must...
